Who Is GoLeanSixSigma.com?

GoLeanSixSigma.com makes it easy for everyone everywhere to build their problem-solving muscles. We provide the most practical, easy to understand and enjoyable Lean and Six Sigma resources available.

We've Helped People From...

Today's Agenda

- What Are Hypothesis Tests?
- Why Do We Need Them in Process Improvement?
- When Should We Use Them?
- How Do We Setup and Run Them?
- Any Words of Advice?

What Are Hypothesis Tests?

Hypothesis: Educated Guess or Theory

- Something that requires further investigation
- There are many ways to test theories
- Hypothesis Testing is a formal way to test theories

What Can Be Tested?

Swiffer 3 X more effective than a broom

Prevagen improves memory in 90 Days

Sketchers Sneakers make you lose weight

Is There a Difference?

Are These Things Related?

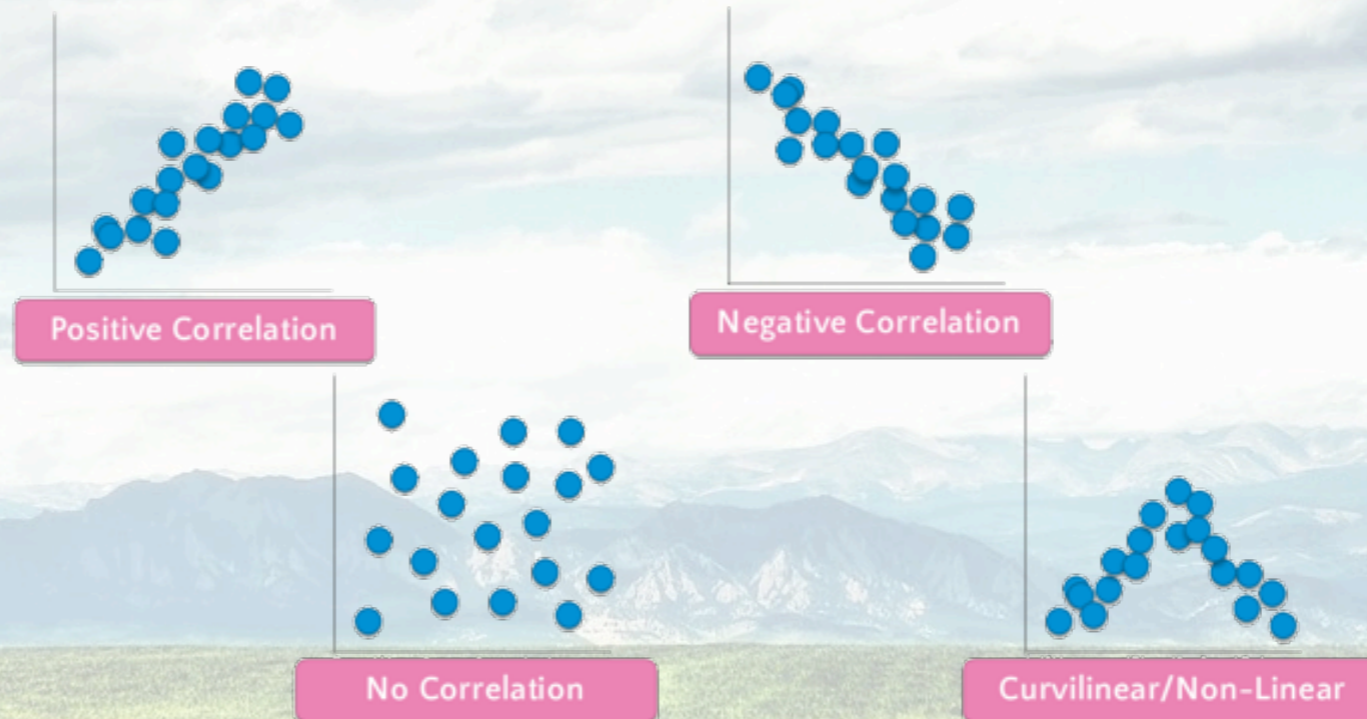

Two Types of Testing

Differences

Correlation

Applying to Process Improvement

Customer Satisfaction

Y

X

Speed of Service

X

Menu Item Availability

Food Freshness

X

Order Accuracy

X

X

Ambience

Applying to Process Improvement

A way of making sure that your theories about the root causes of process issues are worth pursuing

$$Y = f(x_1, x_2, \dots, x_n)$$

When Should We Run Them?

DEFINE

MEASURE

ANALYZE

Determine
root cause

IMPROVE

Determine if
solutions made
the difference

CONTROL

Poll #1:

How have you used Hypothesis Tests?

- A. To verify a root cause
- B. To verify that the solution made a difference
- C. To test the guarantee made by a vendor
- D. I haven't tried to use one yet

The Testing Process

General Hypothesis

1. Practical Problem

- What's the problem?
- What type of data?
- What is the statistic of interest?

Bahama Bistro Example

- Problem – Cannot keep up with hot sauce demand. 16% of the time, customers cannot get the hot sauce they want
- General Hypothesis – the average hot sauce sales are higher at the Downtown location which is causing the hot sauce stock-outs

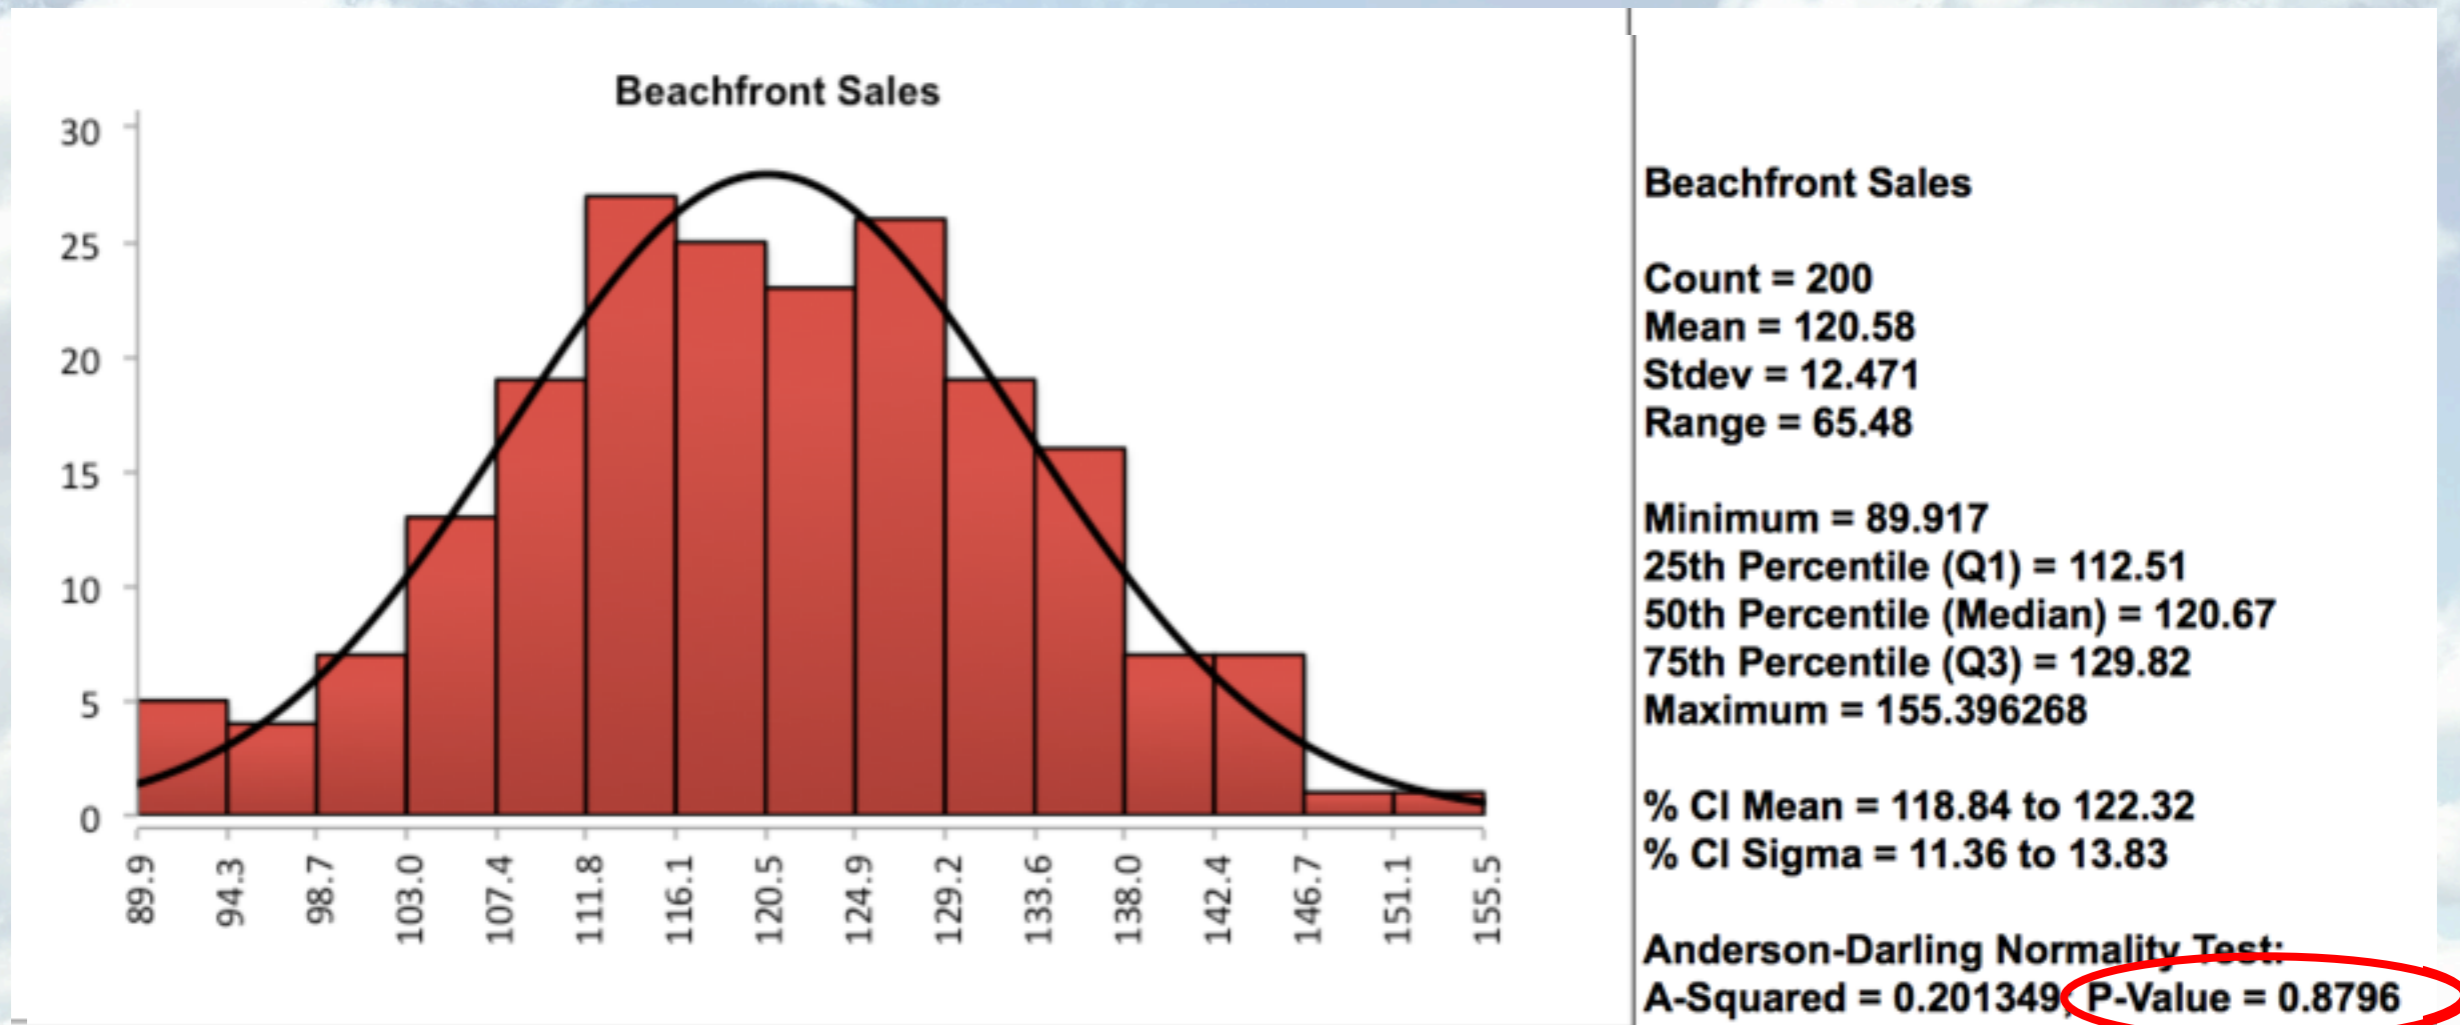

If Continuous – Is It Normal?

- Data Shape – Bell Curve is Normal
- Anderson Darling Test on each Data Set
 - Listed under “Basic Statistics”
- Non-Normal if P-Value < .05 (More on P-Value Shortly)

If Continuous - Test For Normality

Both Data Sets Are Normal

Formal Hypothesis Statements

1. Practical Problem

2. Statistical Problem

- What's the Null Hypothesis?
- What's the Alternative Hypothesis?

Why Null and Alternative?

- Theory: “All swans are white”
 - Proof: hmmm – can’t get all swans together in one place
 - BUT: If we find one *black* swan...we can prove our theory is ***false!***
-
- We can use *falsification* – so we set up the Null Hypothesis and try to disprove it

Null and Alternative Theories

H_0

Ho Hum - There's
no difference

Try to “reject”
the Null

H_A

**A HA! - There's a
difference!**

Then we can pursue
the Alternative

Formal Hypothesis Statements

H_0

Null: There is no difference between the average hot sauce sales at the Downtown location and the Beachfront location

- $\mu_1 = \mu_2$

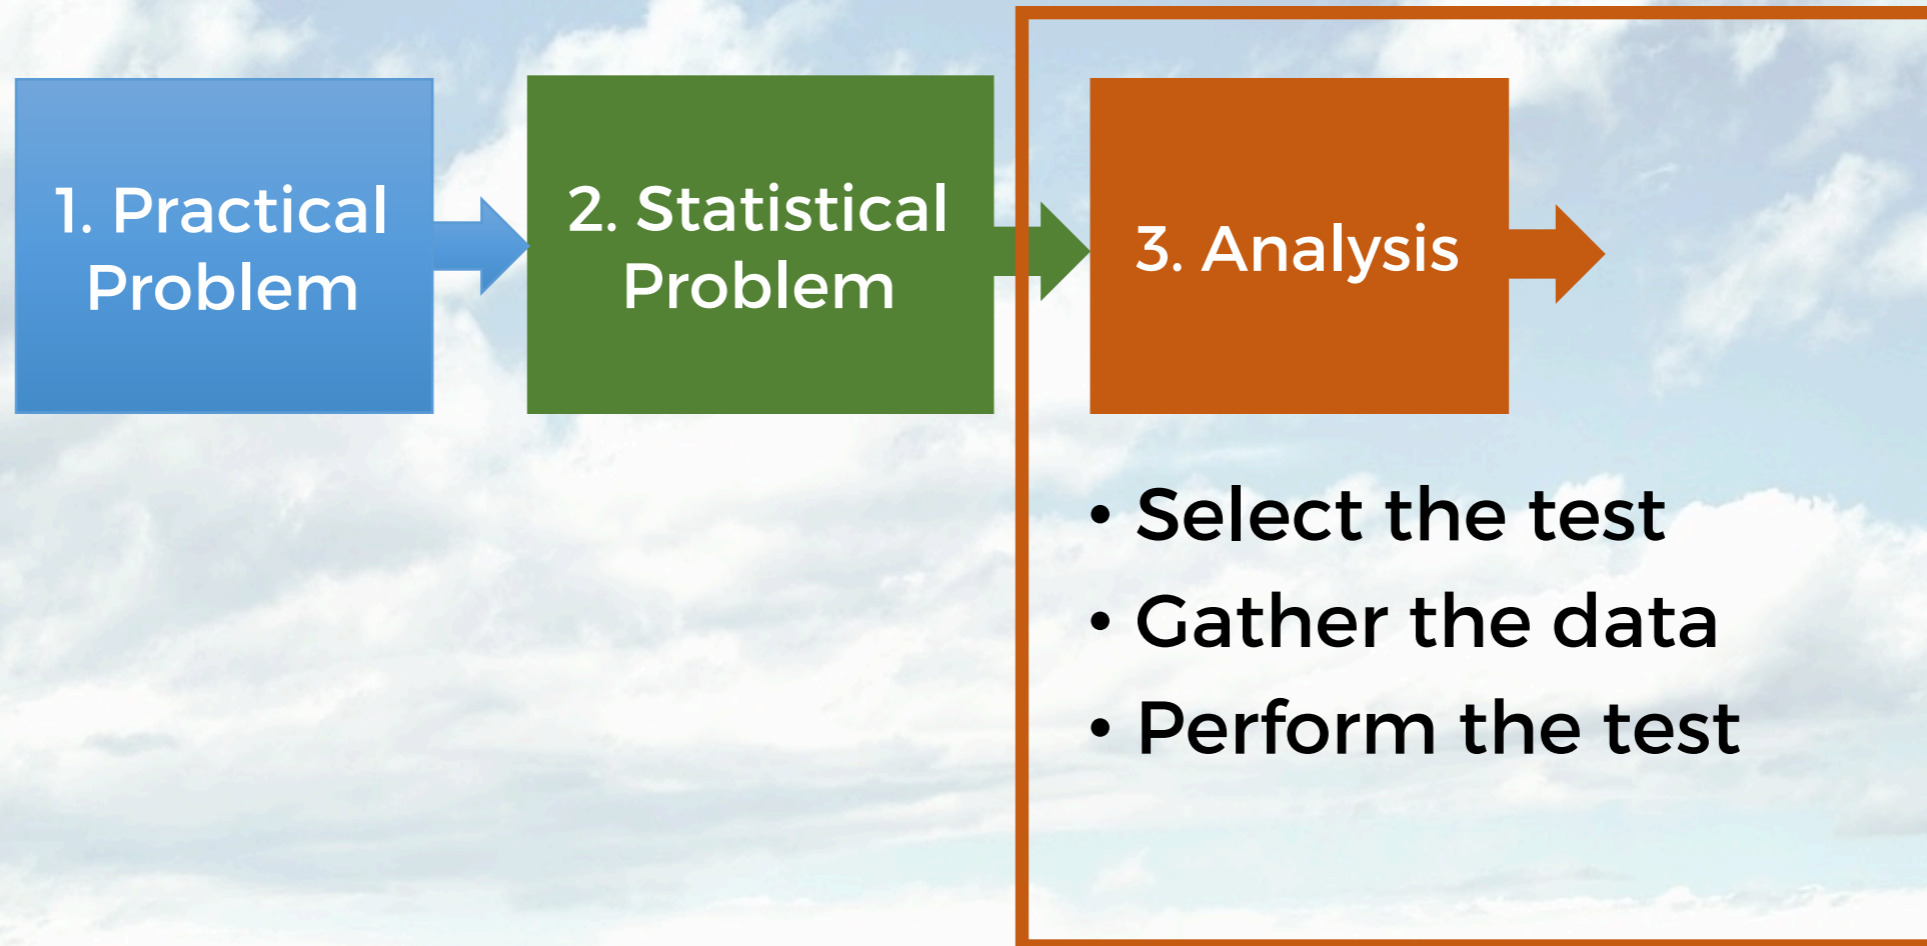

H_A

Alternative: The average hot sauce sales at the Downtown location are not equal to the average sales at the Beachfront location

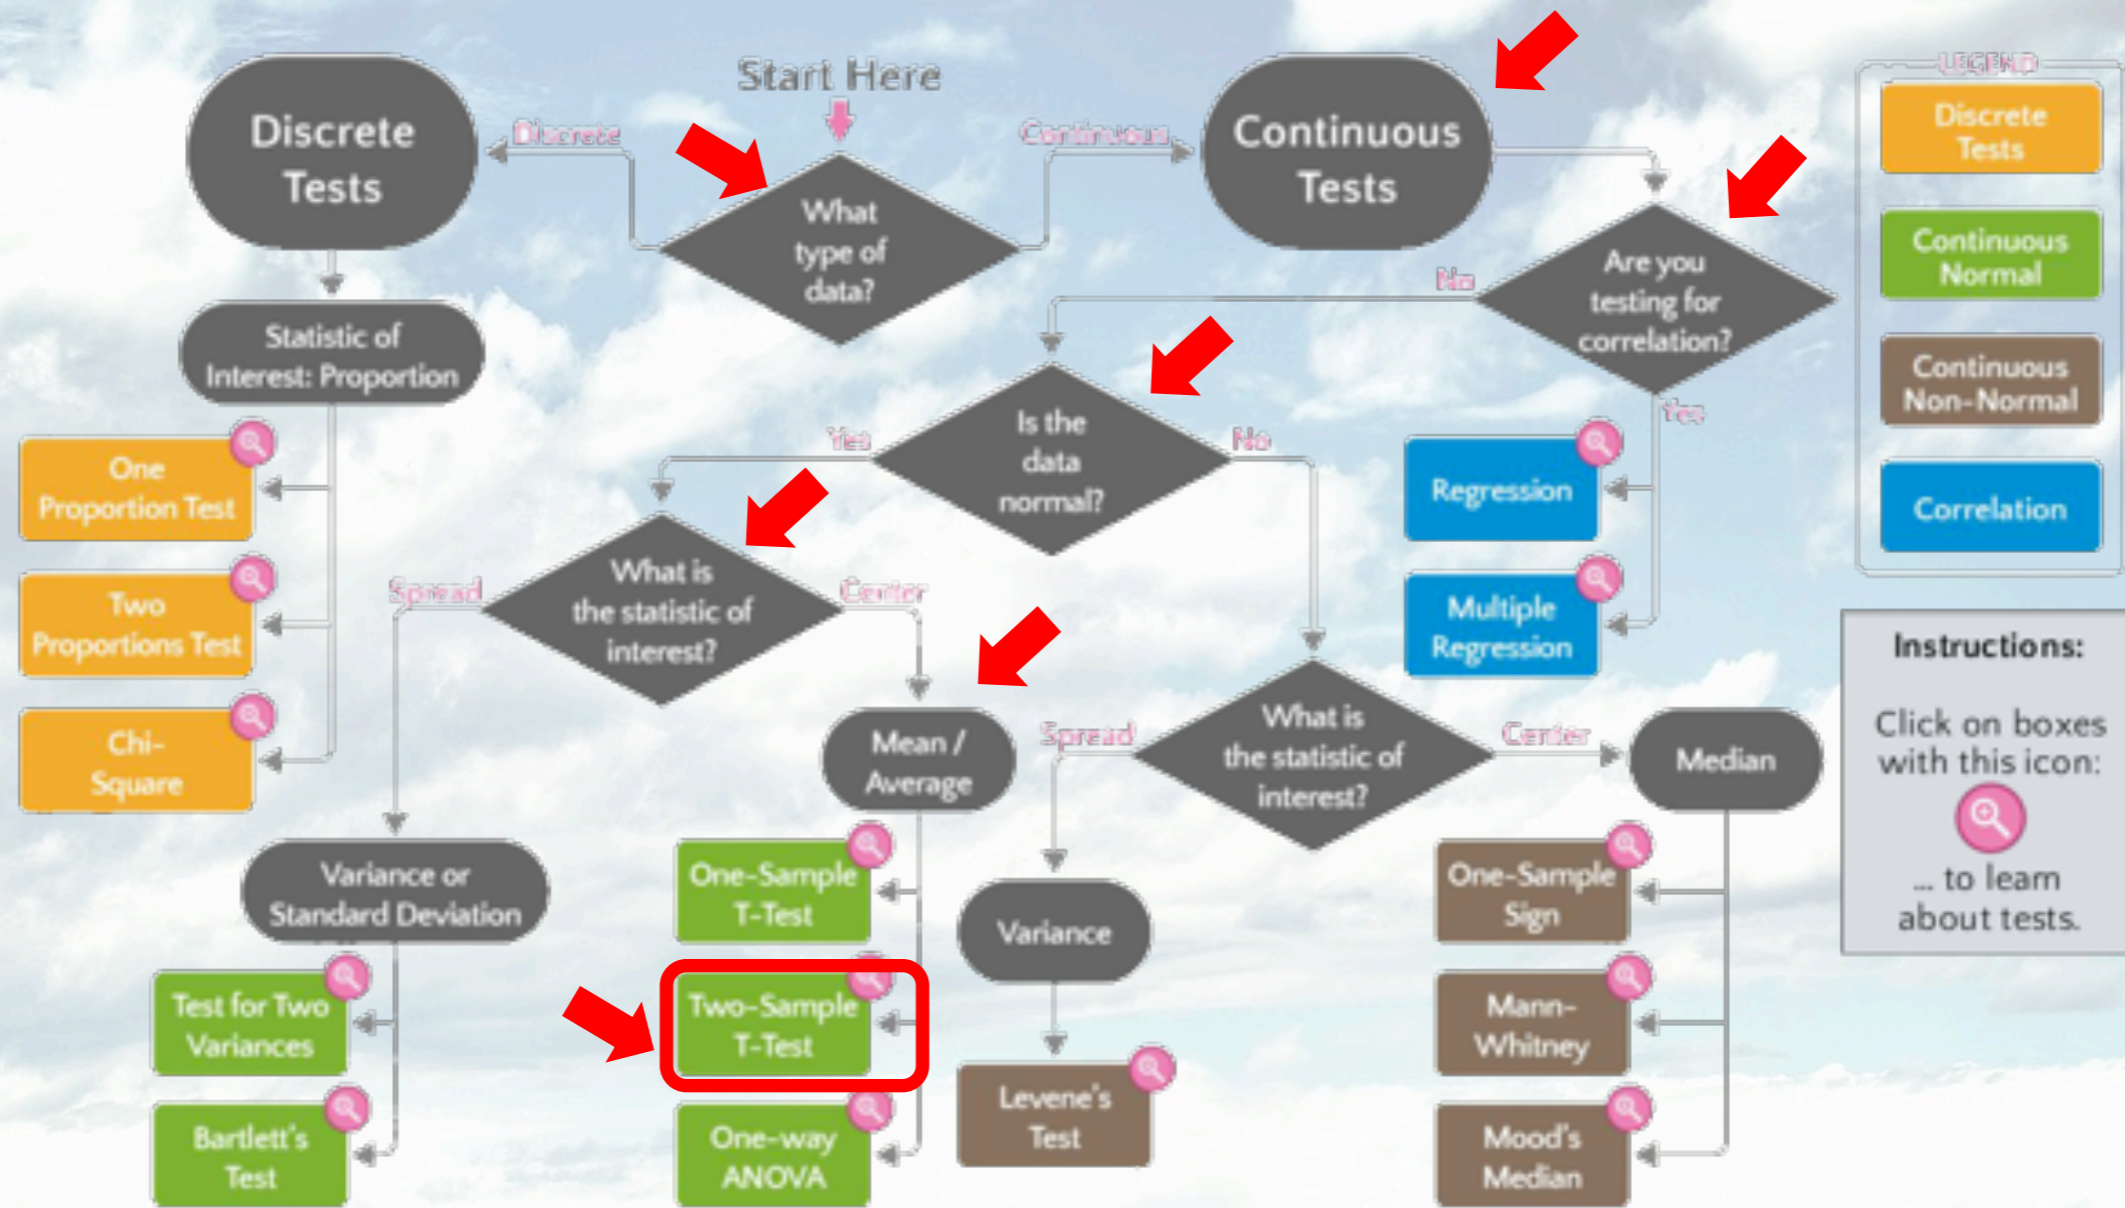

- $\mu_1 \neq \mu_2$

Hypothesis Testing

Select the Appropriate Test

Poll #2:

What are you testing?

- A. Comparing two or more defect rates
- B. Comparing two or more cycle times
- C. Checking if 2 things correlate
- D. Other
- E. Not sure yet

Gather The Hot Sauce Sales Data

	A	B	C
1	Date	Downtown Sales	Beachfront Sales
2	8/1/15	199.38	136.48
3	8/2/15	190.14	131.05
4	8/3/15	161.14	117.07
5	8/4/15	183.14	142.97
6	8/5/15	172.20	127.38
7	8/6/15	162.39	116.54
8	8/7/15	162.45	140.61
9	8/8/15	162.56	127.22
10	8/9/15	158.07	122.63
11	8/10/15	166.65	126.35
12	8/11/15	163.44	122.68
13	8/12/15	186.52	133.78

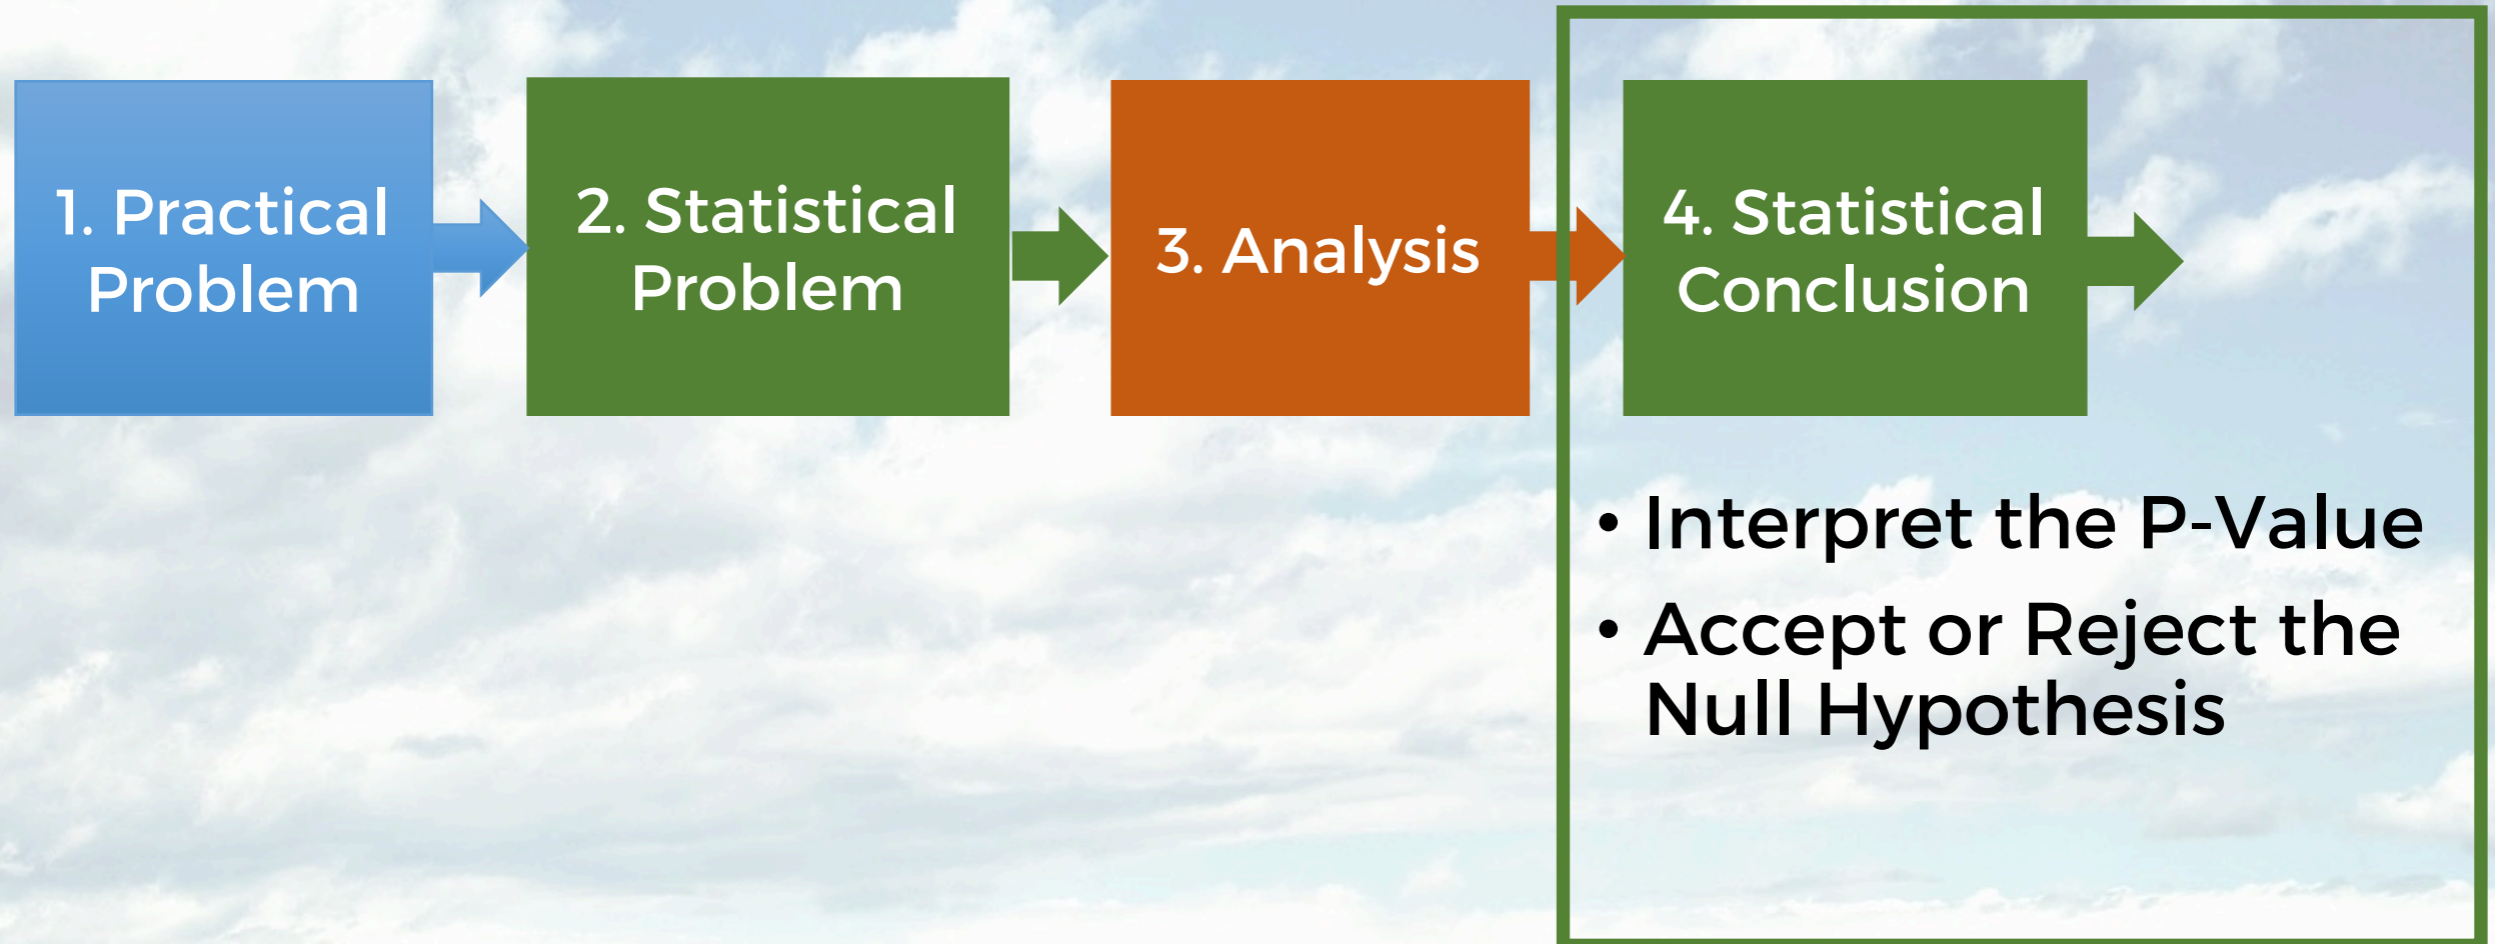

Perform the Test

Test Results

Test Information		
H ₀ : Mean Difference = 0		
H _a : Mean Difference Not Equal To 0		
Assume Equal Variance		
Results:	Downtown Sales	Beachfront Sales
Count	200	200
Mean	160.82	120.58
Standard Deviation	12.714	12.471
Mean Difference	40.245	
Std Error Difference	1.259	
DF	398	
t	31.958	
P-Value (2-sided)	0.0000	
UC (2-sided, 95%)	42.721	
LC (2-sided, 95%)	37.769	

Accept or Reject the Null

P-Value?

What is it?

- P stands for Probability
- Can be between 0 and 1
- Boils down to the probability of the Null Hypothesis being true

“High” P-Values

- If $P = .84$ then there is very little reason to doubt the Null (there's no difference)

“Low” P-Values

- If $P = .015$ then there is very little probability the Null Hypothesis is true (reject the Null)

“Low” is $< .05$

Poll #3 Mini-Quiz:

In which case would you reject the Null Hypothesis?

- A. P-Value = .210
- B. P-Value = .061
- C. P-Value = .045
- D. P-Value = .500

Confidence & Risk

Confidence Level

- 95% Confidence

“I’m 95% confident that the inferences I’m making based on testing these samples are correct”

Risk of being wrong?

- 5%

Standard

What happens if you’re wrong?

- You might reject the Null when there really is *no* difference
- It’s possible since you’re working with samples

Statistical Conclusion

Test Information		
H_0 : Mean Difference = 0		
H_a : Mean Difference Not Equal To 0		
Assume Equal Variance		
Results:	Downtown Sales	Beachfront Sales
Count	200	200
Mean	160.82	120.58
Standard Deviation	12.714	12.471
Mean Difference	40.245	
Std Error Difference	1.259	
DF	398	
t	31.958	
P-Value (2-sided)	0.0000	
UC (2-sided, 95%)	42.721	
LC (2-sided, 95%)	37.769	

**If the P is low
- the Null
must go -
AHA!**

Practical Conclusion

- Convert statistical application into a practical application

Update The Hypothesis Testing Plan

Possible X	Hypothesis	Hypothesis Test	Result
<p>Problem Statement: They cannot keep up with hot sauce demand</p>			
Time period	Cooked orders are not ready, and considered late, when customers arrive	One Proport	
Fill Rates	There is a variability difference in fill rates between three hot sauce types	Levene's	
Time of Day	Customers wait longer to Pick-Up t times of the day	Median	
Day of Week	There's more variation in customer wait-time to Pick-Up orders on certain days of the week	Levene's	
Location	Average hot sauce sales are higher at the downtown location than the beachfront	Two-Sample T-Test	True
Time Period	Packaging time for Pick-Up orders takes longer than it used to	One-Sample Test	True

Okay, we've updated our hypothesis results. Time to move on to another test!

Verifying Results

- Have you ever fixed a root cause that was not the culprit?
- Have you been part of an improvement effort that failed to have an impact? Proof matters.
- If you're claiming your project reduced costs, increased customer satisfaction or reduced cycle time – you have to be able to prove it.

Poll #4:

Who here has ever:

- A. Addressed a root cause that was not a critical “x”?
- B. Fixed a process and saw no positive results?
- C. Watched as others based fixes on assumptions?
- D. Experienced some combination of the above?
- E. Experienced none of the above?

Why Use Tests?

Root Cause: Examples

- Are defects higher at one location? – Find out what's different
- Are a higher proportion of late shipments coming from a particular supplier? – Investigate
- Are the portion weights the same across all meals? – Could lead to mistake-proofing solutions like standard scoops

Verifying Standards: Example

- Is the average delivery time as advertised? – Renegotiate the contract

Verify Solutions: Example

- Did the changes reduce defects, cycle time, etc.? – Confirm and spread the news – build trust, confidence and momentum

Any Words of Advice?

- Clarify the practical problem you are addressing
- Use the Decision Tree to choose the right test
- Spend time setting up your Null and Alternative Hypotheses Statements
- Remember you are looking for:
 - A ***difference*** between particular strata (Who, What, Where, When)
 - ***Correlation*** between the Y and a particular X
- The P-Value is your guide – “If the P is low...”
- Hypothesis Tests are helpful when determining potential “Xs” for root cause, but they can also prove your solutions made a difference.

Today We Covered

- What Are Hypothesis Tests?
- Why Do We Need Them in Process Improvement?
- When Should We Use Them?
- How Do We Setup and Run Them?
- Any Words of Advice?
