Who Is GoLeanSixSigma.com?

GoLeanSixSigma.com makes it easy for everyone everywhere to build their problem-solving muscles.

We provide the most practical, easy to understand and enjoyable Lean and Six Sigma resources available.

We've Helped People From...

Today's Agenda

Process Walk Orientation For Participants

- What is a Process Walk
- Purpose for doing a Process Walk
- How the Process Walk will be conducted
- Process Walk Ground Rules
- Process Walk Interview Sheets
- Definitions
- The 3 Biggest Mistakes

All Work Is a Process

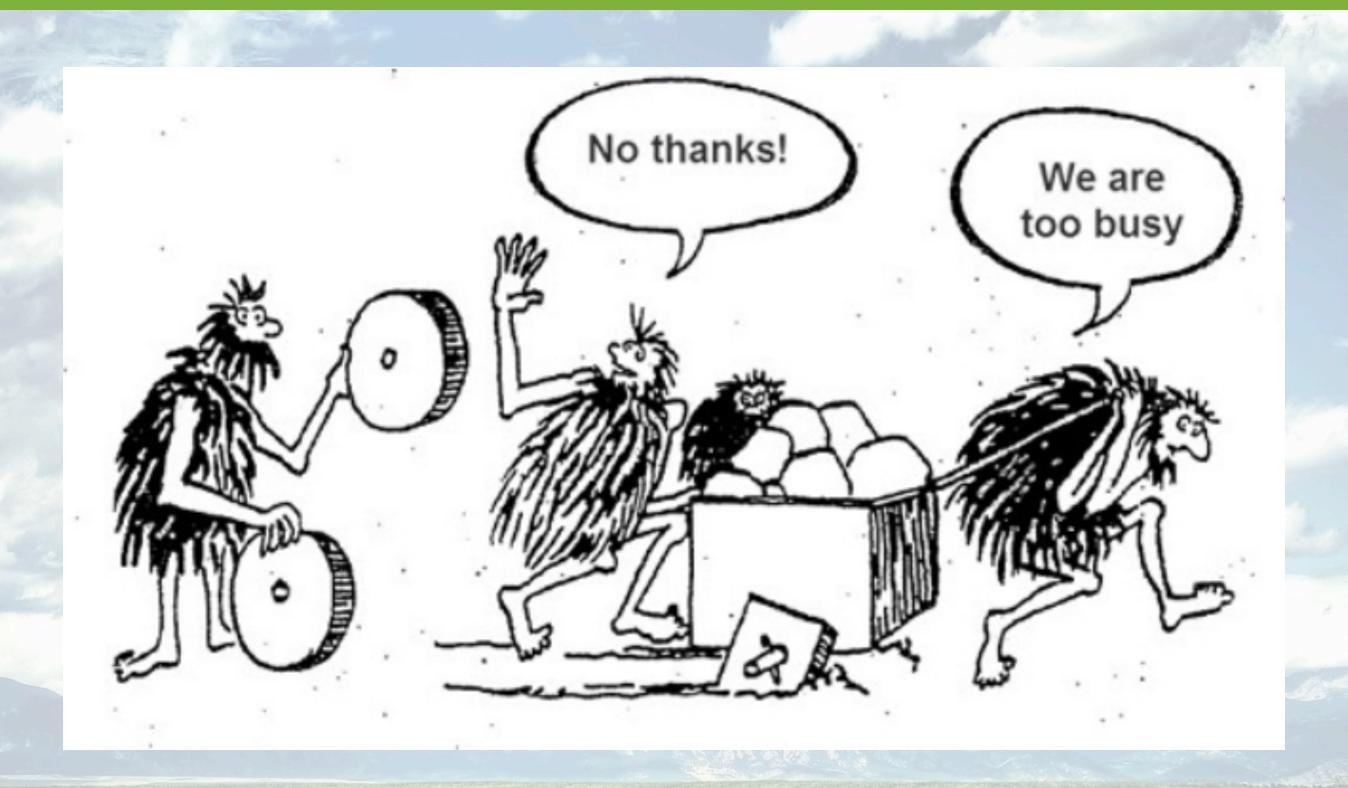

Why Process Improvement

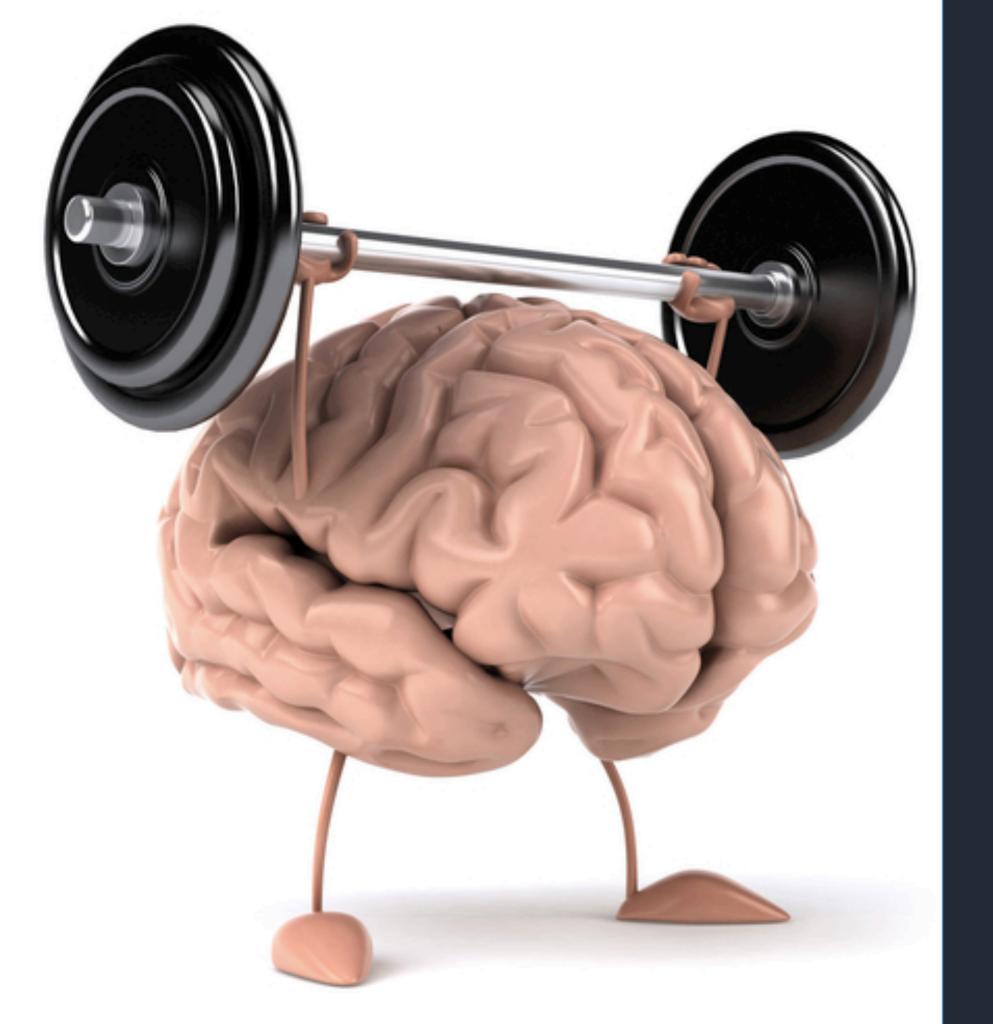

Working ON
the process
versus
Working IN
the process

Work in the process is different than the work of improving the process

Making Time for Process Improvement

Build the problem-solving muscle of every employee

What Is a Process Walk?

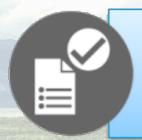

- Process Walk: Physically going to where work happens (Gemba) and interviewing the process participants
- Conducted by process participants
- Builds profound knowledge of the process

Utilize subject matter experts (SMEs) to walk the process, and collaborate with the field

Build profound knowledge of the process and the root causes of problems

Identify the solutions and an implementation plan related to process analysis

Benefits of a Process Walk

- Build profound knowledge of the current sate
- Confirm or bust assumptions "We don't know what we don't know"
- Gain understanding of the whole process

Poll #1:

Have you participated in a Process Walk before?

- A. Yes, and it was a good experience
- B. Yes, but it could've gone better
- C. Yes, but it was not a good experience
- D. No, not yet

1. Some Processes Are Invisible

Do you see a Process?

Process Design Becomes...

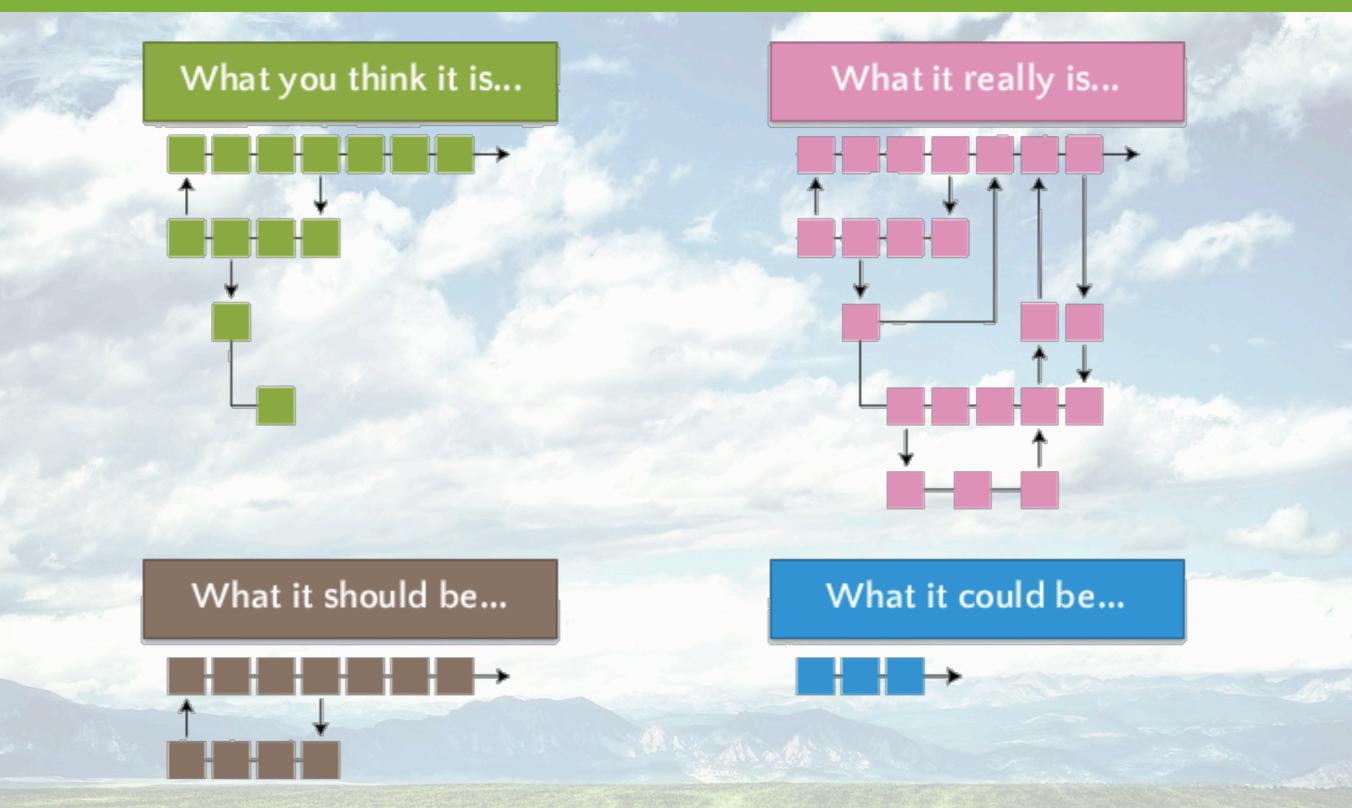

Build a Shared Understanding

Processes Are Like Junk Drawers

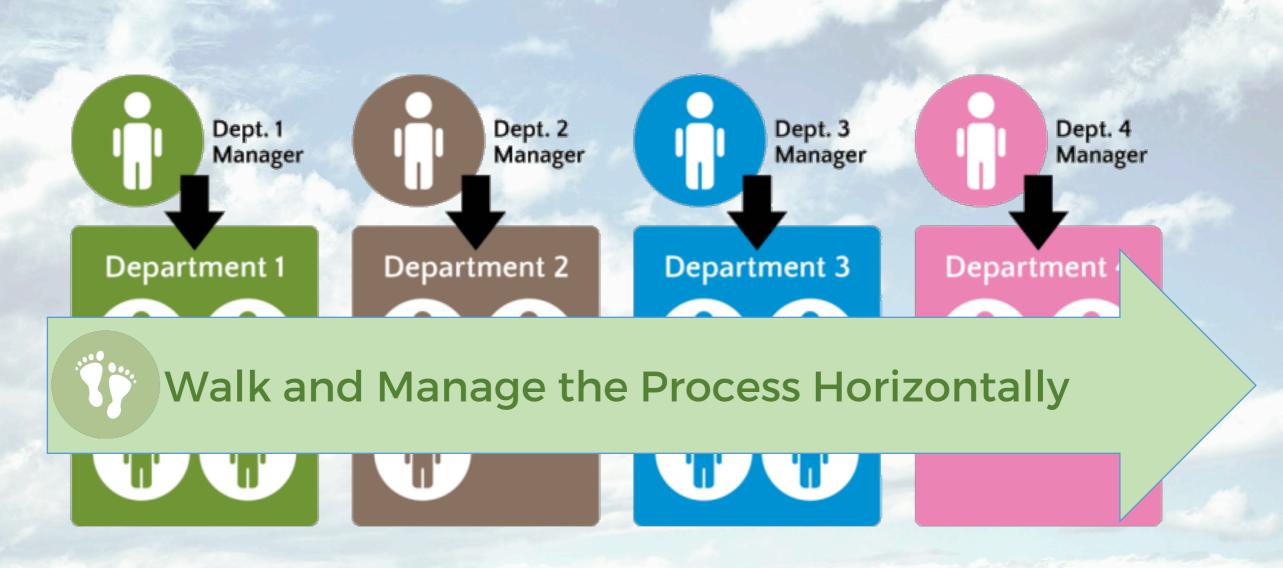

2. Every Process Has Four Versions

3. Vertical vs. Horizontal View

People are managed vertically and processes run horizontally

- Process Walks view the whole process

Avoid silos and manage by process!

Process Walk Ground Rules

- Focus on the process, not the people
- Maintain a blame-free environment
- Be a student of the process
- Be respectful of all parties involved
- Be empathetic; Process workers are the biggest victims of poor process design
- Stay engaged and seek to learn
- Rank has no privilege
- Finger-pointing has no place
- Do not correct interviewees during the walk

Poll #2:

Which of these ground rules are most frequently tested?

- A. Focus on the process, not the people
- B. Rank has no privilege
- C. Do not correct interviewees during the walk
- D. Be a student of the process

8 Wastes

Defects

Efforts caused by rework, scrap, and incorrect information.

Overproduction

Production that is more than needed or before it is needed.

Waiting

Wasted time waiting for the next step in a process.

Non-Utilized Talent

Underutilizing people's talents, skills, & knowledge.

Transportation

Unnecessary movements of products & materials.

Inventory

Excess products and materials not being processed.

Motion

Unnecessary movements by people (e.g., walking).

Extra-Processing

More work or higher quality than is required by the customer.

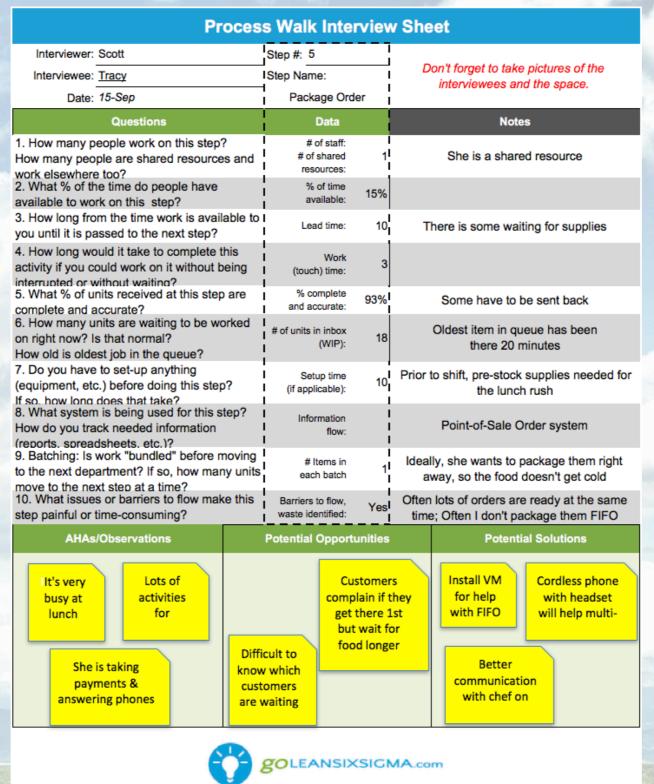

Process Walk Interview Sheet

# of shared resources: What % of the time do people have vailable to work on this step? How long from the time work is available to ou until it is passed to the next step? How long would it take to complete this ctivity if you could work on it without being iterrupted or without waiting? What % of units received at this step are omplete and accurate? How many units are waiting to be worked in right now? Is that normal? Do you have to set-up anything equipment, etc.) before doing this step? so, how long does that take? What system is being used for this step? ow do you track needed information eports, spreadsheets, etc.)? Batching: Is work "bundled" before moving the next department? If so, how many units hove to the next step at a time? Definitions

Process Time: The amount of time it takes to perform work on a unit or "thing" without interruption. Also known as "touch time."

Wait Time: The amount of time a unit or "thing" is waiting to be worked on. (in someone's in-box, in queue, waiting for approval, etc.)

Lead Time (cycle time): The total cycle time of a process. Wait Time + Work Time = Lead Time

of Items in Inbox (WIP): Work in process, the number of units waiting to be worked on.

% C/A (Percent Complete & Accurate): The percent of time an input is received with all of the information finished and correct.

Lead Time Example

 Work Time: The time that the guy who remodeled your kitchen billed you for

• Wait Time: The time during the job, that nothing was being worked on

 Lead Time: How long your life was completely disrupted before the job was finished (Total Elapsed Time)

During Process Walks

- Do not divide and conquer stay together
- Ensure everyone sees the whole process
- Record what happens 80% of the time
- Focus on building profound knowledge
- Hold-off on brainstorming solutions

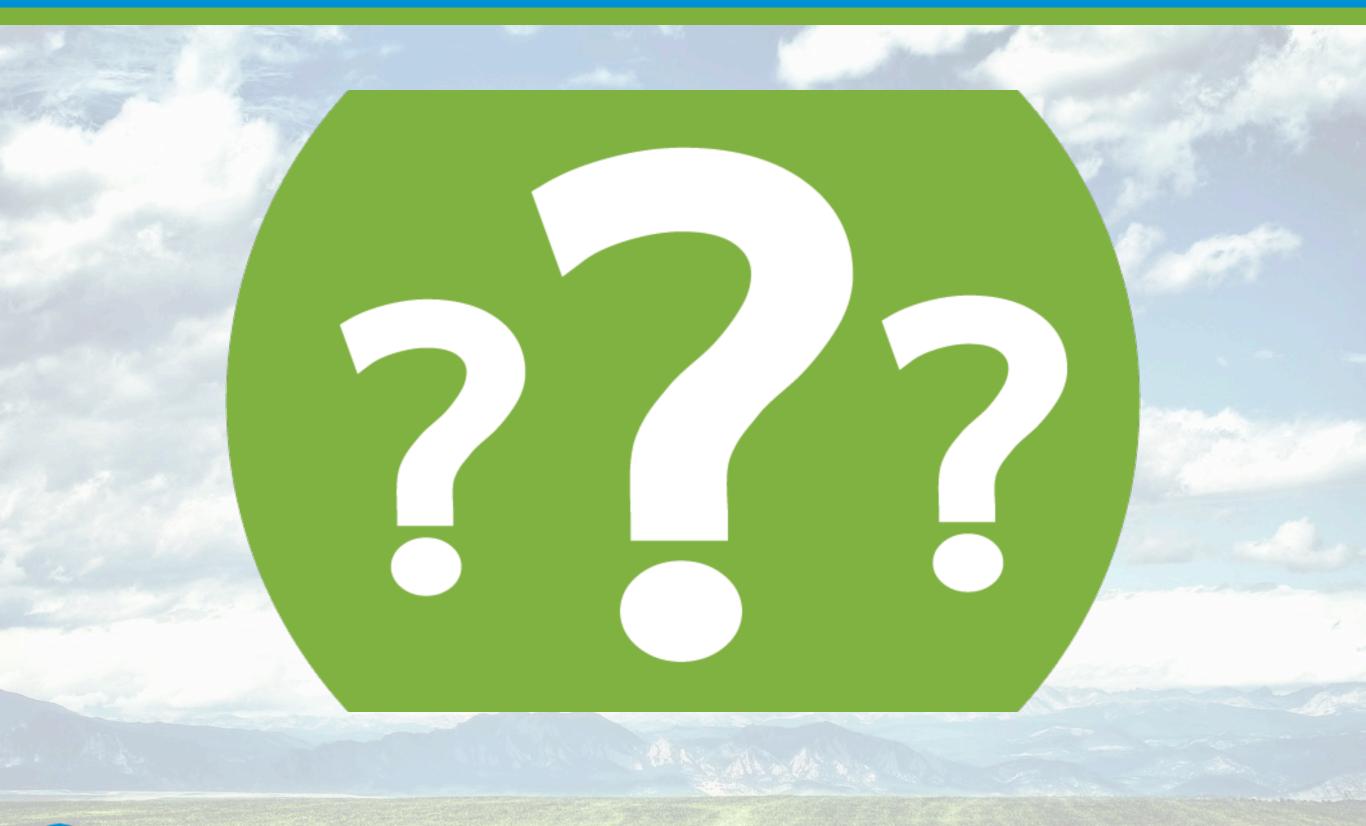

Today We Covered

Process Walk Orientation For Participants

- What is a Process Walk
- Purpose for doing a Process Walk
- How the Process Walk will be conducted
- Process Walk Ground Rules
- Process Walk Interview Sheets
